

"Risk arises from not knowing what you are doing." (Warren Buffet)

"The TRA Workshop" is part of the legally required risk management in all companies and organizations where employees and employers have to work within their organization's "Dynamic Risk Management System" (DRBS).

A Task Risk Analysis (TRA) is also used where the global Risk Inventory and Evaluation (RIE) is too general and needs to be worked out more specifically. Even when working with asbestos and other hazardous materials or carcinogenic products, a specific TRA must be drawn up and implemented. For example, the safety care system VCA 2017 / 6.0 under question 2.2 requires that at least 1 new TRA be developed within a VCA-certified company every year.

TRA's are also often requested by customers and clients. Customers can include a TRA in their SHE plan that must be met by the contractor.

An important objective of this workshop is to being able to interpret a Task Risk Analysis as well as being able to prepare a Task Risk Analysis independently or in small groups.

Terms such as danger, risk, risk factor, prevention measures, prevention hierarchy in relation to the prevention of accidents at work, dangerous situations or actions are part of the process to arrive at a good TRA that is subsequently implemented, evaluated and adjusted when necessary.

During the workshop the various possibilities offered by a TRA will be discussed:

- Tools for the reception and on giving instructions;
- Supervision of compliance with and adjustments to the TRA by the managers;
- TRA as a study of the sub-tasks, activities and actions of employees;
- As a basis for drawing up work instructions;
- Provide insight and analysis of the relationship between actions and risks and measures to be taken;
- Working out a specific TRA in groups based on practical situations.

If you are a manager or you have a responsible position, you are legally obliged to cooperate with and apply risk analysis in collaboration with your prevention service. The TRA workshop provides an ideal practical and concrete interpretation of this assignment. The insights that you will pick up and the preparation of a concrete TRA within your field will be an added value in providing leadership and following up on whom you have been appointed.

	Dutch (English or other language on request)
	Managers, project managers, team leaders, safety positions, technicians, work managers, prevention advisers, VCA officers, interested parties
	Date to be determined
	½ day (4 hrs)
	Place to be determined
	20 places available
	Open training 120 euros / person In-company customized training: 590 euros / half day
